

Pakscape

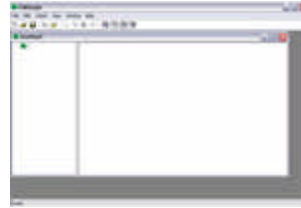

What we are going to do:

How to use Pakscape to make .pk3 files

Get Going!

Okay, I hope you have Pakscape, if not, then [download](#) it.

Now open it up and go to "file" "new"

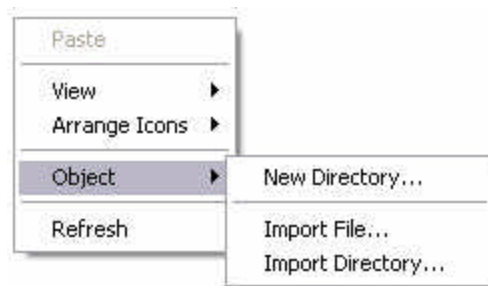

then on the right, where all the white is, right click and go to "object" and you will get these options:

New Directory: This allows you to make folders.

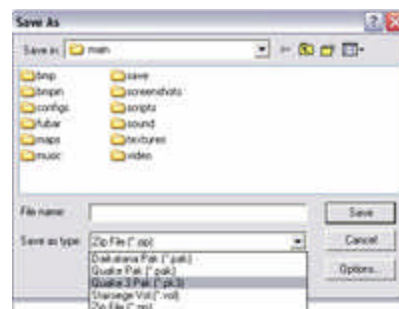

Import File: This allows you to import individual files.

Import Directory: This allows you to import whole folders w/everything in them.
((((VERY HELPFUL))))

So now just find all your files you want in your .pk3 and put them there!!!

When done, go to "file" "save" and type in the name you want, but make sure you pick ".pk3" it will save it as a zip!

And there you go, place it in your mohaa\main folder and you are done!

Here are pics of what my .pk3 looks like while I am making it:
