

Sublime Text 3 – Installation Guide

(By: Zappa)

Syntax Definitions for MoH:AA scripting languages.

[GitHub](#) - [PackageControl](#)

The currently supported file types are:

- [✓] **.scr** Morpheus Script files. (*Syntax Highlighting, Completions & Snippets.*)
- [✓] **.st** State files. (*Syntax Highlighting.*)
- [✓] **.cfg** Config files. (*Syntax Highlighting, Completions.*)
- [✓] **.log** Server log files. (*Syntax Highlighting.*)

Coming soon:

- [] **.mus** Music files.
- [] **.shader** Shader files.
- [] **.tik** TIKI files.
- [] **.urc** URC files.

Installation

1. Download and install the latest version of Sublime Text here:
www.sublimetext.com/3
2. Once Sublime Text is installed, open it,
go to the **menu bar > Tools > Install Package Control...**
3. Open the command palette ([Ctrl]+[Shift]+[P] for Windows/Linux, [Cmd]+[Shift]+[P] for Mac)
4. Search for **Package Control: Install Package** and hit [Enter]
5. Type **MOHAA** and press [Enter] to install it.

If you have never used Sublime Text, i recommend you to give it a try, it have a lot of useful [addons](#) and [custom themes](#) if you don't like the default one.

The default theme in Sublime is dark but it have others dark/light themes installed by default to choose (**Menu -> Preferences -> ColorScheme**)

And there is a great variety of custom themes that you can choose from the <https://packagecontrol.io/>

It also has a Notepad++ color scheme

<https://packagecontrol.io/packages/Notepad%2B%2B%20Color%20Scheme>

and here is a plugin to invert the current color scheme

<https://packagecontrol.io/packages/Invert%20Current%20Color%20Scheme>

I know there is a tool to convert syntaxes from Sublime Text to Atom and Visual Studio Code if someone is interested in using those editors.
